

Internet THE RIGHT PAGES

Linux Printing

<http://www.linuxprinting.org>

As the name suggests, at Linuxprinting.org you'll find all the information that you could require for printing under Linux. The site includes the HOWTO for printing along with a database of supported printers. There's a suggested printer help page if you are considering a new purchase as well as a vendor scorecard. The Foomatic section will also help you get your printer up and running.

<http://i-want-a-website.com/about-linux/>

Humorix offers the latest 'news' with an ever-so-slight Linux bias. Funny stories of Microsoft's supposed antics cosy up to the latest conspiracy theories (usually about Microsoft as well). Never fails to raise a laugh.

News

<http://slashdot.org>

<http://www.kuro5hin.org>

Along with Slashdot, Kuro5hin has been helping us keep news topics in focus. Both systems use a moderator who sorts out news stories and posts them onto the Web site. Here readers can make comments that then spawn their own comments.

SlickPenguin

<http://slickpenguin.com>

This site is devoted to helping out Linux users through sharing their experiences. It's worth checking out to save you time and it's also worth posting your own comments to help out others.

Programming sites

<http://leapster.org/linoleum> ***internet5.png

The best programming site we've found is Linoleum. Here you can pick up all those little tips and tricks to make your code smoother. The algorithm section saves you reinventing the wheel, while the widget sets get you going quicker.

Linux Online

<http://www.linux.org>

The most popular site for Linux users. Designed to act as a central source of Linux information and as a voice for the promotion and advocacy of the Linux operating system.

Linuxcare

<http://linuxcare.com/>

A professional company that helps others gain the most from Open Source technology. It's worth downloading the Linuxcare Bootable Toolbox if you have a CD writer as this disc could save your system one day.

Linux Voodoo

Another essential resource site. The viewlets feature leads you to some nicely written tutorials.

Beowulf

<http://extremelinux.esd.ornl.gov/>

The Oak Ridge Extreme pages are a resource for clustering projects, with a builder's forum and whitepapers on building your own supercomputer. Well, we can all dream, can't we?

Tips

<http://portico.org>

This site has to be the best-kept secret on the Web. Its simple text layout means there's nothing to get in the way of the tips.

Linux PDAs

<http://www.zaurux.com>

If you run Linux on a PDA then this online community is a must visit. Includes news, information and forums on mobile Linux devices.

When we're not hard at work producing the magazine, we like to spend our time searching out software and news on the Internet. In the office we all have our favourite bookmarks. Janet Roebuck sifts through some of the latest finds that we feel are important and useful.

Doom

<http://jcomm.uoregon.edu/~stevev/Linux-DOOM-FAQ.html>

The Doom FAQ for Linux. A quick guide to getting and setting up Doom under Linux.
