April 2003: Issue 29

Next month highlights

Groupware

Groupware is based around business e-mail systems with the addition of collaboration software. They rely on a single mailbox as your point of contact, but allow you to access in many ways.

Groupware is designed to help you work in groups, whether this is for solving problems or communicating it is usually based around email and newsgroups. We examine different systems and compare the best of class for Linux.

Mail User Agents

Mail clients play a very important role in our ever increasing reliance of electronic communications. A poorly designed agent can make life unbearable while a well designed product can make you more productive and happier.

We investigate a range of MUAs, both standalone and integrated to find out what makes a winning design.

Multi distributions

There are times when you just want to try another Linux distribution for a short amount of time. It may be because you are curious or it has specific features that you need.

Rather than lose you current system you can load many distributions onto one machine. All are available whenever you reboot. We give a practical guide to setting up a system with the minimum of effort.

Lindows

LindowsOS is a new operating system that aims to delivers the power, stability of Linux with the ease of a windows environment.

It is designed to be easy to use because of its friendly graphical interface and support for popular Microsoft Windows file types.

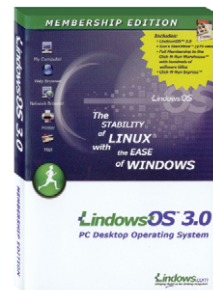

We take a exhaustive look inside this new version to see if it can match up to all the hype. Find out if this is the answer of an Operating System for your desktop and just how much software is it capable of running.

Bootable CDs

Boot disks are now considered relicts of a forgotten time - In an emergency they have been necessary and occasionally save your system. Unfortunately the latest range of modern PCs do not come with the drives included.

With the use of a CD burner, Linux and a boot script you can follow our instructions and make your own multi-booting system. With more options available the stack of diskettes can be reduced to just one CD ROM.
