## KDE 3.1.2

KDE is a powerful Open Source graphical desktop environment for Unix workstations. It combines ease of use, contemporary functionality, and outstanding graphical design with the technological superiority of the Unix operating system. KDE 3.1.2 is a maintenance release for the third generation of the most advanced and powerful free desktop for GNU/Linux, which provides corrections of problems and know bugs.

The source package can easily be compiled onto your system and included on the CD are all the necessary updated libraries.

Reading through the magazine you will see that the KDE project keeps appearing. With this update you can keep your system at the forefront of development and benefit from the latest tools and features. For those who are already using a recent 3.x version, this package enhances some functions but also provides the latest security fixes.

## Recovery is possible

Recovery Is Possible (RIP) is a floppy boot/rescue/backup system. It supports many filesystem types (such as reiserfs, ext2/3, XFS, JFS, UFS, MS DOS, umsdos, and vfat) and contains utilities for system recovery. It might also be possible to install and boot it from a LS-120 floppy drive.

The bootable cd image *rip-53.iso.bin* can be written to a cd/dvd disk, using *cdrecord/dvdrecord* etc. The kernel has IDE and SCSI support. The kernel also has RAID and Ethernet/cable/dsl networking support.

## GIMP 1.2.5

GIMP is an acronym for GNU Image Manipulation Program. It is a freely distributed program for such tasks as photo retouching, image composition and image authoring.

It is an extremely capable piece of software with many capabilities. It can be used as a simple paint program, a expert

quality photo retouching program, an online batch processing system, a mass production image renderer, a image format converter, etc.

GIMP is extremely expandable and extensible. It is designed to be augmented with plugins and extensions to do just about anything. The advanced scripting interface allows everything from the simplest task to the most complex image manipulation procedures to be easily scripted. Version 1.2.5 is the latest stable release.

## Galeon 1.3.5

Galeon is a GNOME Web browser based on gecko (the mozilla rendering engine). It's fast, it has a light interface, and it is fully standards-compliant.

The latest version 1.3.5 "It's not dead, it's resting" has the following upgrades:

- Works with Mozilla 1.3.x, 1.4a, 1.4b, 1.4rc1 and trunk,
- Added popup-blocking controls (white-listing etc),
- Shift-Click to download is back,
- Clone Tab is back,
- Button to launch certificate manager in pref dialog back,
- Various bug fixes,
- FAQ Updated to reflect some common new 1.3.x questions.

## Cerberus IDS 0.0.4

The Cerberus Intrusion Detection System is designed to work as a 24/7 administrator. If there is something in the logs that it does not like, or it notices something that is not supposed to be there, it will sets up a firewall until a real administrator can come and handle it.

You can think of cIDS almost as a junior administrator: it can look for problems in the system, but once it finds them it must tell the actual administrator so that a long term solution can be initiated without further delay. ■
