Thousands of top developers from all over the world make Debian GNU/Linux a unique, modern, safe, community driven operating system. Debian GNU/Linux – like the Linux kernel itself – is maintained in an open manner by a team of volunteer developers.

This Linux Magazine DVD version contains the latest 'sarge' release and includes the new Debian installer system to make it easier to set up and get running on your computer. Debian GNU/Linux supports software applications that are developed for the Linux Standard Base (LSB) and is compatible to version 2.2 of the Filesystem Hierarchy Standard (FHS).

Debian GNU/Linux makes it easy to install packages with the apt-get tool, which handles library dependency issues and package decompression. The main core benefit of the packaging system is the ease with which you can update a running system. This is the reason why Debian GNU/Linux is usually only installed once and then only updated while it remains running.

The DVD is packed with hundreds of applications to cater for every taste and offers a chance to install without the expense and time required to download.
