

The best Web sites for Linux users

THE RIGHT PAGES

Janet Roebuck takes her monthly look at the best sites that have lit up our browsers here at the Linux Magazine offices

Linux Kernel Patch Archive

<http://linux-patches.rock-projects.com/>

This is the best central resource for all manner of Linux kernel patches, from bugfixes to drivers – arranged by both kernel version and patch type.

LDAP Config

<http://www.terminator.net/ldapconf/>

LDAPconf is a plug-in module for linuxconf, providing configuration dialogs for OpenLDAP server and client.

Linux Max

<http://www.linuxmax.net/>

Delivering the latest news, tutorials and opinions on Open Source and Linux to help users enhance their Linux experience.

Shaolinux temple

<http://www.shaolinuxtemple.org/>

As the name might suggest, this is a meditation on all things Linux and is produced by the author between intensive hacking sessions. An excellent read.

Ext3 Home

<http://beta.redhat.com/index.cgi?action=ext3>

The place to find the latest on Red Hat's development of the ext3 filesystem.

Linux Chix

<http://www.linuxchix.org/>

LinuxChix is a great place for women who use Linux and other Open Source operating systems and programs to get together.

Linux Telephony

<http://www.linuxtelephony.org/>

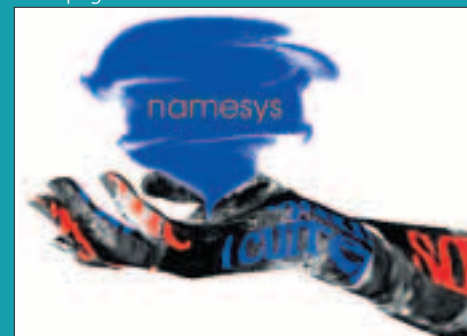

If you're interested in telephony under Linux, then this comprehensive site provides all the info you need on everything from VoiceOverIP to PBX projects.

Reiser Home

<http://www.namesys.com/>

Not to be outdone by Red Hat, the Reiser filesystem also has its own homepage.

Unmaintained Project list

<http://unmaintained.sourceforge.net/>

While Open Source programs can flourish under careful nurture, many promising projects have no family to call their own. Here you can get involved in unmaintained projects and give a good home to an orphaned program.
